

E-Z DOES IT

Penetrant, Lubricant, Protectant & Water Displacer

E-Z DOES IT is a well-balanced blend of corrosion inhibitors and lubricating and penetrating additives that is formulated to lubricate, penetrate, displace moisture and prevent corrosion on machinery and equipment. It forms a protective, non-staining oily film for indoor and outdoor rust and corrosion protection. It is also the perfect product to loosen corroded parts made from many metals, including aluminum.

- ✓ **Provides Metal Surfaces with a Thin, Oily Film that Offers Excellent Protection Against the Elements on Metal Surfaces**
- ✓ **Exhibits Superior Moisture Displacing Properties**
- ✓ **Provides Outstanding Boundary Lubrication and Extreme Pressure Characteristics**
- ✓ **Possesses Excellent Penetrating Action to Loosen Rusty Fasteners, Hinges, Nuts & Bolts, Tools and Sliding Parts**

APPLICATIONS

E-Z- DOES IT is a special multi-purpose product designed to lubricate, penetrate, displace moisture and prevent corrosion. It is not only an excellent penetrant and extreme pressure lubricant, but it also offers superior protection from rust and corrosion due to damp and humid environments. The outstanding barrier film that E-Z DOES IT creates seals out moisture while the specially formulated corrosion preventative additives protect the metal surfaces from oxidation attack from elements like moisture, sodium and chloride ions. E-Z DOES IT can be used on almost any metal machinery or equipment, and it is highly effective for solving the lubrication and metal corrosion problems that occur with the use of salt spreaders and other de-icing equipment.

DIRECTIONS

To Lubricate - Apply to parts of surfaces liberally.

To Penetrate - Apply freely to frozen parts, tap lightly, allow a few minutes to penetrate and repeat as necessary.

To Prevent Corrosion and Rust - Apply to all parts and surfaces regularly to maintain a corrosion barrier.

To Displace Moisture - Apply to parts and surfaces, wait a few minutes and wipe off with a cloth. Reapply for long-term protection.

To Prevent Corrosion and Rust on Salt Spreaders and De-icing Equipment - It is highly recommended to apply ATCO's NU-TRALIZE salt and chloride neutralizing wash to salt spreaders and de-icing equipment before applying E-Z DOES IT. Please make sure equipment is completely dry following the application of NU-TRALIZE before E-Z DOES IT can be added.

E-Z DOES IT can be easily removed with an alkaline cleaner or with a solvent degreaser.

TECHNICAL DATA

Flash Point:	150°F
Specific Gravity:	0.794
Appearance:	Light brown
Odor:	Mild solvent
Density (lbs. per gal.):	6.62
