SNO-GO

Snow Plow Wax

- ✓ Use on Snow Removal Equipment
- ✓ Keeps Snow From Sticking To Blade
- ✓ Increases Plow Efficiency
- ✓ Protects Metal Finish
- ✓ Helps Prevent Salt Corrosion
- ✓ Keeps Ice and Snow From Sticking to Street Signs

SNO-GO's coating provides superior lubrication to reduce the drag and sticking of materials to metal surfaces. It sprays on as a fine mist and dries fast, providing a dry, super slippery, wax-like coating. SNO-GO lubricates, protects and shines metal surfaces, while at the same time preventing snow and ice from sticking to snow removal equipment.

APPLICATIONS

SNO-GO is a special blend of silicone and wax designed to provide a colorless, dry, slippery coating that is both waterproof and will protect metal surfaces. The coating provides superior lubrication to reduce drag and sticking of materials to metal surfaces.

Excellent product for providing increased efficiency of material handling and road equipment.

In the Springtime, spray on blades of grass cutters to keep damp grass from sticking to blades and undercarriage. Lessens drag and increases work efficiency!

In the Fall, spray on snow removal equipment to keep snow and ice from building up on blades, mold boards and wings. Also excellent for use on road signs to keep snow or ice from sticking to allow for easy readability.

DIRECTIONS

Shake well. Spray surface from about 12 inches. Do not wait for surface to dry before wiping. Buff with clean, soft cloth. After use, invert can and spray short burst to clear valve.

TECHNICAL DATA

Composition:	Petroleum distillates
Type:	Hydrocarbons, silicone
Toxicity:	Low
Flammability:	Serious
Coating:	Colorless
