

FLOURISH

16-8-4

Concentrated Liquid Primary Nutrient Fertilizer

FLOURISH 16-8-4 is a concentrated liquid fertilizer containing special penetrating agents to assure quick absorption into the soil - so nutrients can be immediately assimilated by plants. FLOURISH 16-8-4 contains balanced nutrients of organic nitrogen for rapid greening and lush top growth. Phosphorous promotes strong root growth, and potassium develops healthy, disease-resistant stalks. Regular feedings spaced over the growing season produce superior results over single, heavy feedings.

APPLICATIONS

FLOURISH 16-8-4 is a highly sophisticated, complete liquid fertilizer formulated to grow superior turf grasses. Its formulation, containing the primary nutrients of nitrogen, phosphorous and potash, is compounded from high quality materials. It out performs other products by providing the requirements for growing thick, deep green, healthy lawn grasses. Because all the nutrients are in a liquid state, they can be absorbed by leaves and roots of plants. The soil also becomes recharged with life-supporting nutrients.

The nitrogen present in FLOURISH 16-8-4 promotes immediate top growth and greening. The phosphorous promotes adequate cell growth, hastens maturity and stimulates flower, seed and fruit production, resulting in healthier and greener leaves, stems and roots. The potassium is available to stimulate strong stems, to help make the plant more resistant to disease and to increase the yield of tubers and seeds. Potassium is necessary to form starch, sugar and oil, transferring them through the plant.

For Use On: lawns, golf course greens, tees and fairways, athletic fields and industrial lawns.

DIRECTIONS

For use on golf courses, ornamental turf and athletic fields: dilute 1 pint up to 1 gallon of FLOURISH 16-8-4 with sufficient water (1 to 2 gallons) for even application over 1,000 square feet. Repeat this application every 3 weeks from early spring to mid summer. Make first application just prior to spring greening.

For trees and shrubbery: mix 1 pint up to 1 quart of FLOURISH 16-8-4 in 15 gallons of water and spray on foliage to the point of run-off.

For root feeding: use 4 ounces of FLOURISH 16-8-4 per inch of trunk diameter. Dilute with sufficient water and pour or inject into root zone. Repeat application every spring and fall.

TECHNICAL DATA

DOT: Not regulated
Odor: Characteristic
Physical
Appearance: Clear green liquid
