# **RAT-AWAY**

**Rodenticide with Peanut  
Butter Flavorizer™**

...setting performance  
standards worldwide...

- ✓ **Effective Against Norway Rats, Roof Rats and House Mice**
- ✓ **For Use In and Around Homes, Industrial Buildings and Similiar Man-Made Structures**
- ✓ **Convenient - Can Be Quickly and Easily Placed In Strategic Locations**

## APPLICATIONS

RAT-AWAY is a rat bait prepared with ingredients which are attractive as native rodent foods - grains, sunflower seeds and peanut butter . These “natural foods” are laced odorless and tasteless; therefore, the rats are unaware of its lethal nature. Once ingested, death is accomplished through internal hemorrhaging.

**USE RESTRICTIONS:** RAT-AWAY It is effective against Norway rats, roof rats and house mice in and around homes, industrial buildings and similar man-made structures.

**SELECTION OF TREATMENT AREAS:** Determine areas where rats or mice will most likely find and consume the bait. Generally, these are along walls, by gnawed openings, in or beside burrows, in corners and concealed places, between floors and walls, or in locations where rodents or their signs have been seen. Protect bait from rain or snow. For best results remove as much foodstuff, as possible, from the area to be baited.

## DIRECTIONS

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

**READ THIS LABEL.** Read this entire label and follow all use directions and use precautions.

Use only for sites, pests and application methods described on this label. **IMPORTANT:** Do not expose children, pets or other non-target animals to rodenticides.

To help prevent accidents:

1. Store product not in use, in a location out of reach of children and pets.
2. Apply bait in locations out of reach of children, pets, domestic animals and non-target wildlife or in “tamper-resistant” bait stations. These stations must be resistant to destruction by dogs and by children under six years of age and must be used in a manner that prevents such children from reaching into bait compartments and obtaining bait. If bait can be shaken from stations when they are lifted, units must be secured or otherwise immobilized. Even stronger bait stations are needed in areas open to hooved livestock, raccoons, bears or other potentially destructive animals or in areas prone to vandalism.
3. Dispose of product container and unused, spoiled and unconsumed bait as specified on this label.

Note: Bait stations are mandatory for outdoor, above-ground use. Tamper-resistant bait stations must be

used if children, pets, non-target mammals or birds may access the bait.
