ACTABS

**Time Release Condensate
Pan Treatment**

...setting performance
standards worldwide...

- ✓ **Prevents Costly Condensate Pan Overflow**
- ✓ **Eliminates Slime Buildup**
- ✓ **Non-Corrosive Treatment**
- ✓ **Contains No Free Chlorine**
- ✓ **Long Lasting**

APPLICATIONS

ACTABS is a time-dispensed, slow dissolving tablet that controls rust, sludge, and slimy accumulations in air conditioning condensate pans. When used as a regular preventative maintenance treatment, ACTABS prevents buildups which cause clogging of condensate drains, resulting in destructive overflow damage.

ACTABS is used to keep condensate pan drains free-flowing in refrigeration systems and all window or floor air conditioning units in any commercial, public, institutional or industrial establishment with air conditioning.

Tablets are easy to use and store. Individual packaging protects the water-soluble tablets from atmospheric moisture. This packaging assures maximum effectiveness during extended storage periods.

DIRECTIONS

Place the ACTABS tablet in the condensate drain pan at a point furthest from the drain. Use one (1) tablet for each 1 sq. ft. of drain pan area. Good preventative maintenance requires that an ACTABS tablet be in use at all times, which helps stop blockages caused by airborne dust, foreign matter, rust, scale and slime. ACTABS must be used in accordance with label directions.

TECHNICAL DATA

Type:	Tablet
pH:	N/A
Flammability:	Nonflammable
Toxicity:	Moderate
Odor:	Aromatic-herbal
Color:	Blue
Weight Per Tablet:	Approximately 25 gm.
Dimensions:	1 3/4" diameter x 3/4" thick
