

### Typical Weed Control Problems:

- ✓ Annual and perennial weeds and grasses growing in open areas such as fencerows, storage yards, railroad rights-of-ways and industrial areas.

### LIBERATOR 650... Performance in Action.

- **CONTROLLED BROADCAST.** LIBERATOR 650 is a ready-to-use granular herbicide with particles sized just right for accurate, uniform spreading with all types of broadcast spreaders. **PERFORMANCE BENEFIT:** Product may be applied with a seed spreader, fertilizer spreader, shaker type applicator or any equipment which will distribute this product over area to be treated.

---

- **FULL SEASON CONTROL.** LIBERATOR 650 controls weeds from pre-emergence through the full growing season or longer and may be applied at any time of the year. Early application of LIBERATOR 650, before vegetation has emerged, prevents growth of weeds and eliminates unsightly dead vegetation. **PERFORMANCE BENEFIT:** Prevention of plant re-growth saves on labor time. Reduces the amount of herbicide required for a full year, which saves money.

---

- **HIGHLY ACTIVE FORMULA.** LIBERATOR 650 contains a full 4% of the active ingredient Bromacil®. This ingredient provides residual control of even tough perennial weeds. **PERFORMANCE BENEFIT:** More active ingredients for your money. High concentration of actives provides long-term control.

---

## APPLICATIONS

LIBERATOR 650 is a non-selective herbicide used for the control of a wide range of annual and perennial weeds and grasses in non-cropland areas. The granular formulation is ideal for full season control on non-cropland areas such as fencerows, storage yards railroad rights-of-ways and industrial areas.

## DIRECTIONS

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. Do not enter or allow others to enter treated area until dusts have settled.

This granular non-selective herbicide is used for controlling a wide range of annual and perennial weeds and grasses. Do not use in residential area. It is recommended only for non-cropland areas, such as railroad rights-of-ways and industrial areas. The application of 200 to 300 pounds of this product per acre usually results in a nonproductive condition for a period of a year or more. The duration of non-productivity is dependent upon rainfall, type of soil and other conditions.

Apply product as furnished using a seed spreader, fertilizer spreader, shaker type applicator or any equipment which will distribute this product over the area to be treated.

To control annual and most perennial weeds and grasses, apply at a rate of 200 to 300 pounds per acre; on smaller plots, 0.5 lbs. - 0.68 lbs. per 100 ft. Repeat spot treatment may be required when deep rooted perennial weeds are present. To obtain best results, apply to the ground where it will be absorbed by the roots. Applications early in the season have been found to give results superior to applications made later in the season. This product may, however, be applied at any time of the year. Maximum effectiveness in arid regions is obtained when application is made just prior to the rainy season.

## TECHNICAL DATA

### Composition:

#### ACTIVE INGREDIENTS

Bromacil (5-bromo-3-sec-butyl-6-methyluracil) ..... 4.0%

INERT INGREDIENTS ..... 96.0%

**Type:** Granular herbicide

**Flammability:** Non-flammable

**Dosage:** See label

**Equipment:** Any broadcast type spreader
