POWER I

Chelated Iron

ATCO
INTERNATIONAL

...setting performance
standards worldwide...

- ✓ **Quick Greening Power**
- ✓ **Will Not "Burn"**
- ✓ **Absorbed Into Plants and
Grass Quickly**
- ✓ **Highly Concentrated**

APPLICATIONS

POWER I provides the iron that all plants need for proper growth, reproduction, flowering and fruit production. Iron is a necessary trace nutrient, and iron deficiencies will inhibit proper development of the plant, resulting in chlorosis (Chlorosis is caused by iron deficiency). POWER I is designed for both foliar feeding and root feeding and is quickly absorbed into the plant for immediate results. The convenient liquid concentrate allows for easy application by direct spraying or through sprinkler systems.

DIRECTIONS

Foliar application: Mix 1 gallon of POWER I in 64 gallons of water. Apply to cover foliage to the point of run-off, or at the rate of 2.5 gallons per acre.

Root Feeding: Use 4 ounces per inch trunk diameter diluted with 5 to 10 gallons of water and pour or ingest the solution around the root zone and drip line.

Turf: Mix 1 gallon of POWER I in 64 gallons of water and apply at a rate of 2.5 gallons per acre.

TECHNICAL DATA

Compound:	Chelated iron
Type:	Soluble liquid iron
pH:	5.0
Flammability:	Non-flammable
Toxicity:	Low
% Iron:	5.5 as soluble iron
Color:	Brown
