

SET-UP with PTFE*

High-Pressure Penetrating Lubricant *(PTFE is also known as Teflon®)

SET-UP...Performance in Action.

● **PENETRATING ACTION.** SET-UP is formulated to penetrate like a liquid and cures to an extra heavy-duty, thick grease.

PERFORMANCE BENEFIT: Lowers labor costs and time for greasing operations.

● **COLORLESS.** SET-UP does not contain any dye. Once cured, SET-UP provides a clear film of lubrication on the surface.

PERFORMANCE BENEFIT: Versatility. One product can be used anywhere. No need to worry about appearance.

● **TEMPERATURE STABILITY.** SET-UP will stay in place at extremely high temperatures, in excess of 450°F. Fortified with PTFE, SET-UP clings to metal surfaces and gives excellent lubrication.

PERFORMANCE BENEFIT: Reduces downtime and maintenance labor because of smooth, cool performance.

● **MAINTAINS LUBRICITY UNDER SEVERE CONDITIONS.** SET-UP withstands high pressures and shock loads and is resistant to bleeding. SET-UP is formulated to provide exceptional, long-lasting performance.

PERFORMANCE BENEFIT: Improved lubrication. Friction and wear reduced to minimum.

APPLICATIONS

SET-UP with PTFE is a colorless, high-pressure penetrating lubricant. SET-UP dispenses as a penetrating oil then sets up as a grease-like lubricant.

SET-UP contains PTFE which enables it to give excellent lubricity. It is also formulated to perform under high loads without thinning out, thereby maintaining superior lubricating properties.

DIRECTIONS

Shake well before using. Saturate area to be lubricated. Use extension tube for hard to reach areas.

TECHNICAL DATA

Composition:	Aerosol penetrating lubricant with PTFE
Type:	Hydrocarbon solvent
Water Resistant:	Yes
Rust Resistant:	Yes
Color:	Clear
Flammability:	Extremely flammable aerosol
